Author Index

Abidat, M.	Prediction of the steady and the non-steady flow performance of a highly loaded mixed flow turbine	173–184
Ardizzon, G.	Optimum incidence angle in centrifugal pumps and radial inflow turbines	97–107
Artt, D. W.	A loss analysis based on experimental data for a 99.0 mm radial inflow nozzled turbine with different stator throat areas	27–42
Artt, D. W.	An experimental assessment of incidence losses in a radial inflow turbine rotor	43–53
Ashcroft, S. J.	The effects of non-air mixtures on the operation of a diesel engine by experiment and by simulation	55–68
Baines, N. C.	Prediction of the steady and the non-steady flow performance of a highly loaded mixed flow turbine	173–184
Bata, R.	The performance and emission characteristics of C_1–C_5 alcohol–gasoline blends with matched oxygen content in a single-cylinder spark ignition engine	363–379
Becker, J.-E.	High-temperature fuel gas cleaning and removal of alkalis using molten slag	151–158
Bell, M. G. H.	Modelling vehicle emissions using the TEMIS program. Part 1: enhancement of the TEMIS framework	197–204
Bohn, D.	A comparative throughflow analysis of axial flow turbines	141–145
Bolter, J. R.	Section 3B in 2020 Vision	407
Cai, R.	A new analysis of recuperative gas turbine cycles	289–296
Carcasci, C.	Design issues and performance of a chemically recuperated aeroderivative gas turbine	315–329
Carey, P. M.	Section 7 in 2020 Vision	476
Carlton, J. S.	Section 4B in 2020 Vision	443
Chen, K.	Evaluation of the instantaneous unsteady heat transfer in a rapid compression-expansion machine	351–362
Chesse, P.	Computer aided study of the transient performances of a highly rated sequentially turbocharged marine diesel engine	185–196
Chew, Y. T.	Numerical simulation of the effect of a moving wall on separation of flow past a symmetrical aerofoil	69–77
Chung, M. K.	Performance prediction of mixed-flow pumps	109–115
Cook, D.	Section 4B in 2020 Vision	448
Crane R. I.	A critical analysis of the thermodynamic advantages of reheat in gas turbines	81–87
Crowley, M. E.	Evaluation of implicit numerical methods for building energy simulation	331–342
Damangir, A.	A new concept for a squirrel-cage fan inlet	343–349
De, S.	Study of thermodynamic performance of an integrated gasification combined cycle power plant	89–95
Desideri, U.	Simulation of power plant transients with artificial neural networks: application to an existing combined cycle	299–313
Dilin, P.	A computational and experimental evaluation of the performance of a centrifugal fan volute	235–246
Elder, R. L.	Application of casing treatment to an industrial axial-flow fan	225–233
Elder, R. L.	Numerical optimization of a stator vane setting in multistage axial-flow compressors	247–259
Facchini, B.	Design issues and performance of a chemically recuperated aeroderivative gas turbine	315–329
Fan, H.-Y.	An inverse design method of diffuse blades by genetic algorithms	261–268
Fantozzi, F.	Simulation of power plant transients with artificial neural networks: application to an existing combined cycle	299–313
Farley, E.	Section 4B in 2020 Vision	436
Gautam, M.	The performance and emission characteristics of C_1–C_5 alcohol–gasoline blends with matched oxygen content in a single-cylinder spark ignition engine	363–379
Gibbins, J. R.	Advances in laboratory tests for predicting coal-related combustion problems	13–26
Grosshans, G.	Computer aided study of the transient performances of a highly rated sequentially turbocharged marine diesel engine	185–196
Gudenau, H. W.	High-temperature fuel gas cleaning and removal of alkalis using molten slag	151–158
Ha, J. S.	Performance prediction of mixed-flow pumps	109–115
Hachemi. M.	Prediction of the steady and the non-steady flow performance of a highly loaded mixed flow turbine	173–184
Hamidou, M. K.	Prediction of the steady and the non-steady flow performance of a highly loaded mixed flow turbine	173–184
Harvey, S.	Design issues and performance of a chemically recuperated aeroderivative gas turbine	315–329
Hashmi, M. S. J.	Evaluation of implicit numerical methods for building energy simulation	331–342
Hawley, J. G.	The effects of non-air mixtures on the operation of a diesel engine by experiment and by simulation	55–68
Henderson, G.	Section 4C in 2020 Vision	454
Hetet, J. F.	Computer aided study of the transient performances of a highly rated sequentially turbocharged marine diesel engine	185–196
Hill, S. D.	Application of casing treatment to an industrial axial-flow fan	225–233
Hoberg, H.	High-temperature fuel gas cleaning and removal of alkalis using molten slag	151–158
Hrafnkelsson, B.	Estimation of extreme mass flowrate in district heating systems	125–133
Irving, S.	Section 4D in 2020 Vision	458
Ishizuka, M.	The effects of the outlet area and the location of the main power supply unit on the cooling capability through naturally air-cooled electronic equipment casings	381–383
